1.Factorial on N.

```
public class FactorialOfN {
   static int Factorial(int num) {
      if (num == 0 || num == 1) {
         return 1;
      }
      return num * Factorial(num - 1);
   }
   public static void main(String[] args) {
      int num = 5;
      int fact = Factorial(num);
      System.out.println(fact);
   }
}
```

2.Cheack Reverse String.

```
public class ReverseString {
   public static String reverse(String str) {
      if (str == null)
         return null;
      char[] array = str.toCharArray();
      int left = 0;
      int right = array.length - 1;

      // Swap characters moving towards the middle
      while (left < right) {
         char temp = array[left];
         array[left] = array[right];
         array[right] = temp;
         left++;
         right--;
      }
      return new String(array);
   }
   public static void main(String[] args) {
      System.out.println(reverse("Java")); // Output: avaJ
   }
}
```

3.String is Pallindrome or not.

```
public class ReverseString {
   public static String reverse(String str) {
      if (str == null)
         return null;
      char[] array = str.toCharArray();
      int left = 0;
      int right = array.length - 1;
      while (left < right) {
         char temp = array[left];
         array[left] = array[right];
         array[right] = temp;
         left++;
         right--;
      }
      return new String(array);
   }
   public static void main(String[] args) {
      String str = "Varad";
      String str2 = reverse(str);
      System.out.println("Original String: " + str);
      System.out.println("Reversed String: " + str2);
      if (str.equals(str2)) {
         System.out.println("Palindrome");
      } else {
         System.out.println("Not a Palindrome");
      }
   }}
```

4.Reverse of Array.

```
public class ReverseOfArray {
   public static void main(String[] args) {
      int arr[] = {1, 2, 3, 4, 5};
      int n = arr.length;
      int arr1[] = new int[n];
      for (int i = 0; i < n; i++) {
         arr1[i] = arr[n - 1 - i];
      }
      for (int j = 0; j < n; j++) {
         System.out.print(arr1[j] + " ");
      }
   }
}
```

5.Find GCD.

```
public class FindGCD {
   public static void main(String[] args) {
      int a=12;
      int b=18;
      int gcd=0;
      for(int i=1;i<Math.min(a,b);i++){
         if(a%i==0 && b%i==0){
            gcd=i;
         }
      }
      System.out.println(gcd);
   }
}
```
